

NEW, IMPROVED.

Introducing the new JAX Aerosol can. With improved features like color-coding, and clear food-grade and NSF markings, we're taking the guesswork out of lubrication.

Color Coding identifies the product as food-grade, fleet and material handling, industrial or solvent and cleaner.

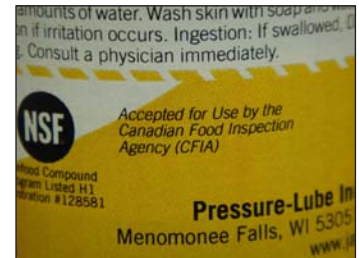

Hazard symbols now appear on all cans to identify hazards.

The NSF logo and rating appear on all products that are registered by NSF.

The green JAX food-grade symbol appears on H1 and 3H products.

Products approved by Canada have this indication on the label back.
