

Reduce Risk. Improve Safety & Health Compliance.

The IBT Virtual Safety Manager (VSM) is a web based comprehensive OSHA compliance service. Backed by expert support and on-going updates from IBT's safety compliance team, VSM is a thorough and effective tool for developing and administering a compliant safety and health program. It's like having IBT's best compliance consultants at your fingertips, day or night.

REAL SAFETY, VIRTUAL MANAGER

Many companies don't know they are in violation of OSHA safety standards until it's too late. On average, OSHA conducts around 40,000 inspections and cites nearly 90,000 violations per year. The lack of a comprehensive and up-to-date safety program can be both costly and dangerous.

An effective way to manage safety and health compliance

IBT's Virtual Safety Manager enables companies large and small to develop site-specific OSHA compliant safety programs that include employee safety manuals and procedures, training programs, record keeping, reporting, Industrial Hygiene documentation, and a company-wide portal of safety resources.

VSM delivers

A properly designed and managed safety program leads to better trained employees, safer workplace habits, fewer accidents, and fewer workers' compensation claims. VSM is not a one-time safety workshop or the occasional compliance audit. It is the core of a company's successful safety and health program, always up-to-date, and always "on." VSM supports development and growth of a safety culture, and reflects corporate leadership's commitment to safety. VSM is professional safety management around the clock, for far less than the cost of employing a full time safety professional.

Reduce Risk with VSM

- » Identify potential worksite hazards
- » Create site-specific safety manuals
- » Improve regulatory compliance
- » Conduct safety knowledge assessments
- » Create safety reference materials
- » Develop and promote a safety culture
- » Make safety consistent across multiple sites
