# Compliance to smile about.

## A revolution in safety eyewear equality.

Gone are the days when the women on your staff had to wear the same safety eyewear as the men. Say goodbye to poorly-fitting safety eyewear causing compliance rebellion among the women. It's time for a revolution.

Introducing the new W-Series, safety eyewear designed specifically to fit women. Smaller sizing, modern designs and updated styles for comfortable, all-day protection. Compliance has never looked better.

## A woman's face is distinctly different.

Since a woman's face is smaller than a man's, it stands to reason that her eyewear needs to be smaller in scale, too. But it's not just an issue of size; women's faces generally have a more vertical brow, fuller, more rounded cheeks, and a smaller and narrower nose bridge. These differences have presented particular problems relative to the fit of her safety eyewear. Until now.

## Better fit, better compliance.

Specifically designed to fit women, the new W-Series eyewear are narrower across the front, shorter at the temple and slimmer in the nose bridge than standard safety eyewear, providing optimum fit and coverage. And one of our styles is especially lightweight, making them even more face friendly. The resulting secure, comfortable fit is reason enough that women will actually want to wear these. The styling details we've incorporated will have women demanding to wear them.

## All safety bases are covered.

It's true that a better fit means better safety, eliminating gaps that might allow hazardous substances to enter the eye area. And because we'd never compromise safety, you can rest assured these eyewear are every bit as tough as our other safety eyewear, and are compliant with ANSI Z87+ high impact standard.\*

*Add the W-Series to your inventory.  
Great fit for women, great fit for your compliance program!*
