Flame Resistant Conveyor Belts to EN 14973 and EN 12882
For use underground with electrical and fire safety requirements to EN 14973

UTS conveyor belts

Requirements to EN 14973
- Electrical conductivity
- Drum friction test
- Resistance to ignition
- Determination of fire propagation

For this design of belt, compliance with the safety requirements to EN 14973, classes A and B2 has been proven by an external test institute. If an order is placed, this certificate can be made available.

Special versions:
Other fire classes, other versions of belt and special physical properties (e.g. resistance to abrasion) are possible on request.

Splicing with corresponding high-quality materials:
To splice conveyor belts with fireproof cover stock, we recommend that only ContiTech splicing materials be used. This then ensures optimum splice strength and service life.

Example applications for UTS conveyor belts used underground:
- Tunnels
- Mining

Not required

- **Not required by the standard.** We do however strongly recommend this, due to the wear of the cover stock in operation, as there is no guarantee that the conveyor belt will meet the fire safety requirements over the entire period of operation.

### Standard range:

For this design of belt, compliance with the safety requirements to EN 12882, category 1-5A has been proven by an external test institute. If an order is placed, this certificate can be made available.

- Convoyer belts with **EP plies**
  - for belt widths from 650 to 1,800 mm and in the following belt strengths:
    - EP 400/3, 4+2 to EP 1250/3, 8+5
    - EP 500/4, 4+2 to EP 2000/4, 8+5
    - EP 630/5, 5+2 to EP 2000/5, 18+6

- Convoyer belts with **steel cord tensile members** for belt widths from 650 to 2,600 mm and in the following belt strengths:
  - ST 630, 5+4 to ST 1250, 12+8
  - ST 1400, 6+4 to ST 3500, 12+8

belong to our standard range.

### Special versions:

Other fire categories (5B and 5C), other versions of belt and special physical properties (e.g. resistance to abrasion) are possible on request.

### Splicing with corresponding high-quality materials:

To splice conveyor belts with fireproof cover stock, we recommend that only ContiTech splicing materials be used. This then ensures optimum splice strength and service life.

### Example applications for FRS conveyor belts:

- Coal-fired power stations
- Biomass power stations
- Fertilizer industry
- Wood processing industry
- Port operations
- Open-cast mining
- Waste incineration plant

---

As at March 2, 2010 – Petersmann I Page 10  www.dmt.de
ContiTech has developed fabric and steel cord conveyor belts which meet the much higher requirements of EN 12882 and EN 14973. Due to our many years of experience in the field of fire safety, we are able to offer our customers conveyor belts certified by an external test institute.

**UTS conveyor belts** to EN 14973

**FRS conveyor belts** to EN 12882

---

ContiTech Conveyor Belt Group

We are manufacturers of fabric and steel cord conveyor belts, special products and service material – for mining, mechanical and plant engineering, and many other branches of industry. At our plants – the most modern production facilities anywhere in the world – we turn out a complete range for all conveyor jobs. With our comprehensive service, we can provide support for the trade, for OEMs and operators.

The ContiTech division of the Continental Corporation is a development partner and original equipment supplier to numerous industries for high-quality functional parts, components and systems. With its know-how in rubber and plastics technology, ContiTech contributes significantly to industrial progress and mobility that is safe, comfortable and eco-friendly.
